

Vendor cloud from Astra Group

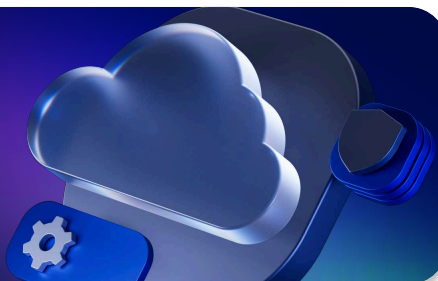

We build a cloud platform and services trusted by both business and government

Choose the cloud model that works best for you

Public cloud

Dedicated cloud

Physically isolated server infrastructure in the Astra Cloud data center, ready for certification

Mail

Secure corporate service

Certified secure cloud

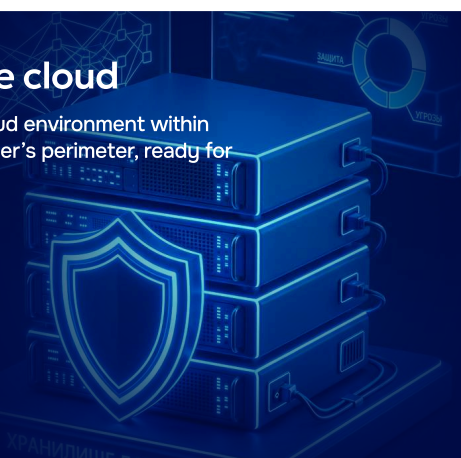

Isolated environment for hosting IT landscapes of any complexity

On-premise

Private cloud

Secure cloud environment within the customer's perimeter, ready for attestation

XCloud Hardware-Software Package

Ready-to-use platform with a pre-installed private cloud for a quick start

Start with a pilot

Test Astra Cloud for your specific tasks

Certified secure cloud

Built-in information security controls

Firewalls

Trusted boot tools

Antivirus protection

Security event analysis

Intrusion detection and prevention systems

Cryptographic protection mechanisms

Public key infrastructure

Cloud for sensitive data

Turnkey certified environment

No need to spend time designing and certifying your own infrastructure.

Compliance with regulatory standards

UZ-1 and K-1 attestation enables processing of information of any confidentiality level.

Ready-made foundation for client information system certification

Infrastructure with a valid UZ-1/K-1 certification reduces time and cost of certifying your information systems by several times.

Technological sovereignty

The service is built entirely on Russian-developed solutions: Astra Cloud Platform, server and network hardware, and information security tools.

Controlled access

Platform access is granted only to verified users via a secure GOST (state standard) tunnel.

Reduced capital expenditures

No investment required in server hardware, storage systems, or expensive certified security tools – everything is included in the service.
