

ispsystem

Clouden is a platform for managing hybrid IT
infrastructure and clouds

vmmanager

Clouden

dcimanager

What is Clouden?

This is a universal platform for IT infrastructure monitoring and management of multi-cloud, virtualization, and physical resources in a single interface.

This solution belongs to the CMP (Cloud Management Platform) category and is suitable for any organization with a simple, clear, and reliable management of heterogeneous IT environments on the agenda.

What is Clouden Used for?

Clouden is suitable for organizations and companies that need to:

Create an internal service provider

Automate routine operations and reduce manual labor

Manage geo-distributed resources from a single window

Clouden Key Features

Supporting hybrid and multi-cloud environments

Single window for managing any infrastructure, including local (VMmanager, DCImanager, VMware vSphere, VMware Cloud Director, OpenStack, OpenNebula) and public clouds

BI module

Ensure transparent control of infrastructure expenditures

Resource billing

Ability to calculate allocated resources using various approaches (by resources, in money)

Self-service portal

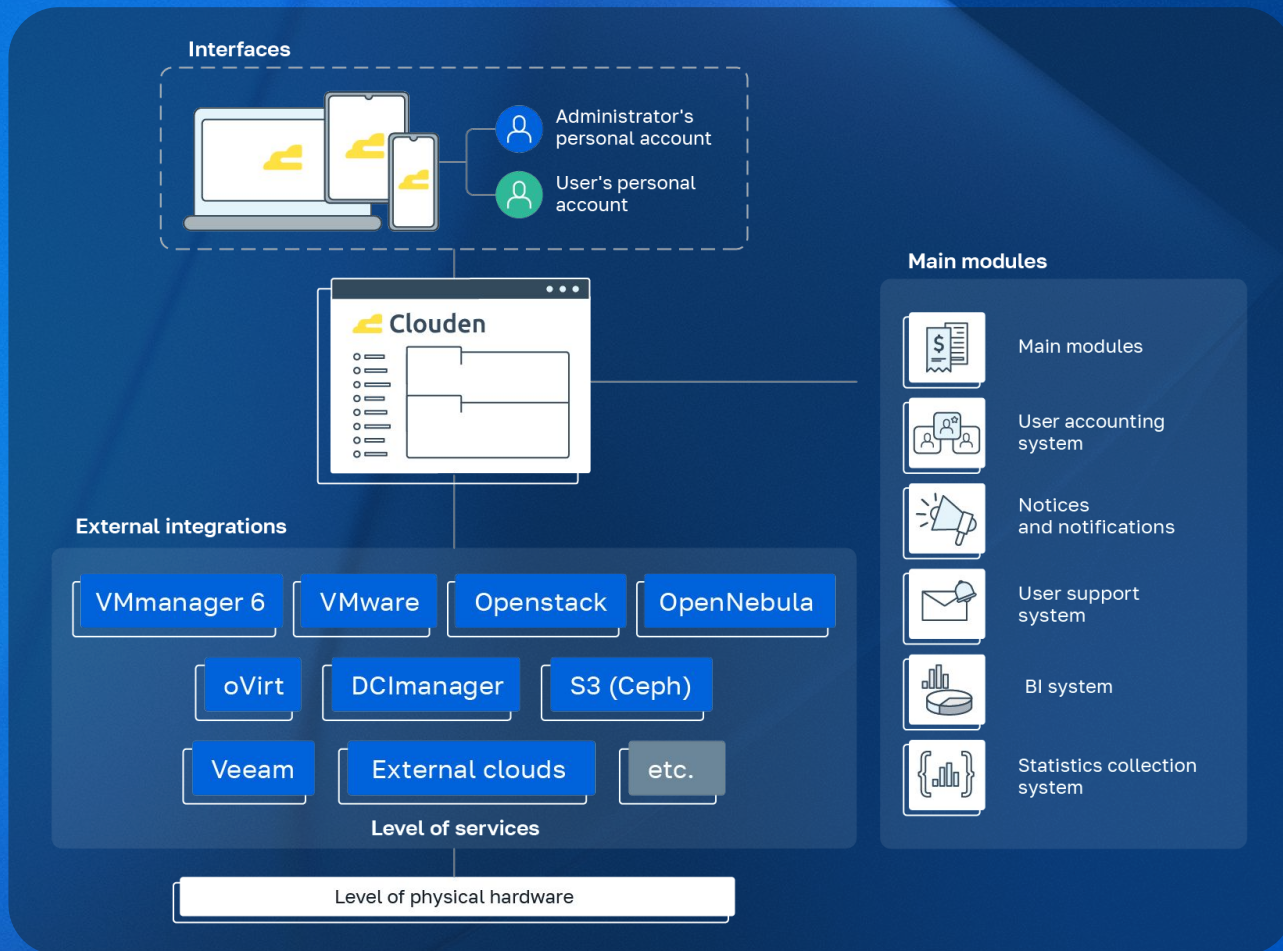

Self-ordering and management (if permitted) of resources by users

Built-in help desk

Tickets, API integration with your system

Application store

Unified marketplace for PaaS services

Who is Clouden for?

Medium and large companies

With the need for hybrid management and expenditure control

Companies with their own development team

With the need to speed up provisioning of services for development and testing

Companies planning to transition between platforms or import substitution

To speed up migration, integration and monitoring

Companies with geographically distributed and branch-based infrastructure

To help manage resources in a single window

Organizations with dedicated IT companies

Internal service providers with distributed management

Cloudden's Value for Various Teams

For CEOs, CTOs, and finance teams

Resource utilization analytics helps making decisions about infrastructure development and understanding infrastructure costs

For engineers and DevOps

Automation of routine operations, convenient resource allocation

For end users

Easy interaction with resources through your personal account, high level of automation

Clouden Licensing

The Clouden platform is licensed per virtualization host.

Subscription license

Technical support included

Perpetual license

1, 2 or 3 years of technical support included

ISPsystem Product Ecosystem

dcmanager

For physical IT infrastructure management and accounting

100k servers managed

10k servers in one location

56 locations in one DCImanager

Over 300 clients worldwide

vmmanager

For server virtualization and VDI implementation

450k virtual machines managed

25k virtual machines in one cluster

56 clusters in one VMmanager

1500+ companies using VMmanager

Clouden

For managing hybrid IT infrastructure and clouds

600+ simultaneously connected external systems to provide services

Up to **2 million** services running simultaneously on the platform

500+ active installations across providers

Thank you for your time and keep in touch!

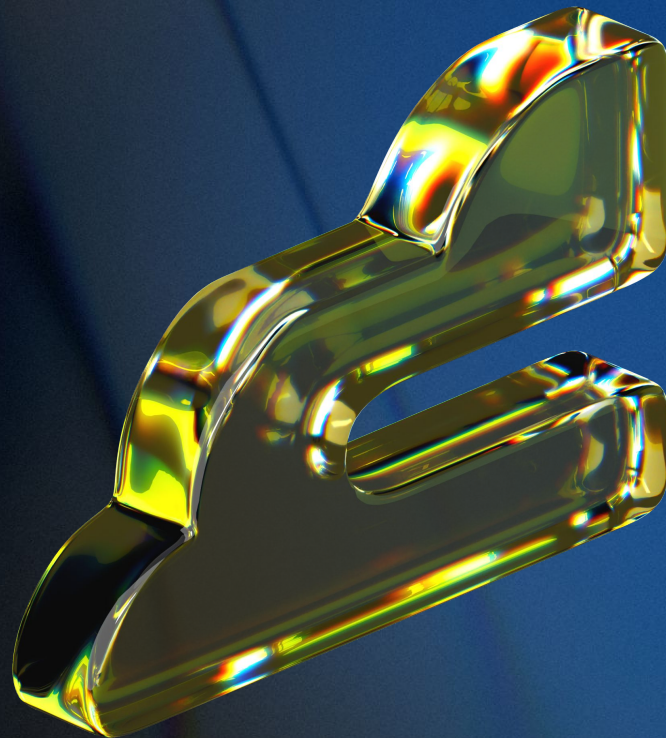

We will guide you through
and answer any questions
